SUMMARY

Senior web and iOS engineer with 4 years of experience shipping games and consumer apps end to end: TypeScript/Node APIs, native Swift iOS, React web, and LLM and generative-media pipelines. Core engineer on a small team behind three AI consumer apps (1,900+ shipped tickets), leading the backend and building the web clients. They include Simmy (4.8★, #3 in Books on the US App Store) and Wasabi (4.7★ from 10K+ ratings).

EXPERIENCE

Maestro (TapTap Entertainment): Senior Software Engineer *Culver City, CA (Hybrid) · Feb 2024 – Present*

Simmy: AI interactive-fiction game for iOS and web (Aug 2025 – Present) · 4.8★ (5K+ ratings), #3 in Books (US)

- Built most of the TypeScript/Express/Prisma API: 50 data models, ~235 endpoints and 1,700+ automated tests on AWS ECS, RDS, Redis and BullMQ workers.
- Built multi-provider LLM and generative-media pipelines (Anthropic, OpenAI, Gemini, Grok, Fal, HeyGen) for story, chat, photo, video and narration, with per-job timeouts and automatic refunds.
- Built LLM cost instrumentation at the model-call layer and used it, along with model bake-offs, to move high-volume calls to cheaper models.
- Built the in-app economy and App Store server-to-server subscriptions with idempotency.
- Planned and led the Simmy Web build in 12 phases and shipped it solo in 12 days: a React 19/TypeScript port of the iOS game with ~1,400 tests, Stripe checkout and analytics parity with iOS.
- Led a security review of the API and fixed its critical findings.

Wasabi: AI-hosted multiplayer party game (Oct 2024 – Aug 2025) · 4.7★ (10K+ ratings), Top 100 in Board & Card

- Built the real-time multiplayer engine on Socket.IO, Redis and BullMQ: lobbies, PIN join, voting, disconnect recovery, and bot players that kept public lobbies joinable.
- Built the AI game layer and a live voice host (Claude, ElevenLabs, Cartesia, LiveKit), App Store and Stripe monetization, and the Next.js web client.

TapTap Live: live cash-prize trivia app for college students (Feb – Oct 2024)

- Built 1v1 challenges and instant matchmaking, daily puzzle games with Apple Music and LLM-generated questions, and coin, XP, streak and leaderboard systems across the Node API, the Socket.IO game server and the Swift app.
- Designed the friends table behind the game lobby, leaderboards and friend finder, and migrated existing contacts into it in resumable batches.

EnspireMedia: Full Stack Developer *Remote · Oct 2022 – Feb 2024*

- Built features across five B2B SaaS products (field service, sawmill operations, logistics) on React/Redux, Firebase and Cloud Functions, including most of the TimberTrack front end.
- Designed and built a two-way QuickBooks Online integration (OAuth, encrypted credentials, and sync of customers, invoices, payments and tax rates), plus quoting and invoicing flows.

SKILLS

Languages: TypeScript, JavaScript, Swift, SQL

Backend: Node.js, Express, Prisma, PostgreSQL, Redis, BullMQ, Socket.IO, Jest

Mobile & Web: iOS (UIKit, StoreKit/RevenueCat, Live Activities), React, Next.js, Vite, Tailwind

AI & Infra: Claude, OpenAI, Gemini, Grok, ElevenLabs; model routing and cost analysis; AWS (ECS, RDS, S3), Docker, GitHub Actions, Stripe

EDUCATION

Western Governors University: B.S. Software Engineering, in progress (expected 2028)
